

ELECTRIC VEHICLE CHARGING NETWORKS

Greenlots® Sky is our advanced web-based tool to manage the **Greenlots®** charging network. Electric vehicle users can locate the nearest charging point, view usage history and operators control individual charge points all by simply logging in to their account online.

Features

An Easy-to-Use Web-based Solution

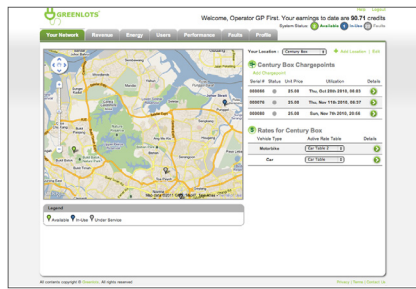

Greenlots® charging networks harness the power of wireless technology to enable seamless communication delivered via the Internet

- Get alerted to events in real-time
- Know energy demand data up to the minute
- Reach out to your users by sending greetings and ads directly
- Create a dynamic time-of-use price profile according to peak rates

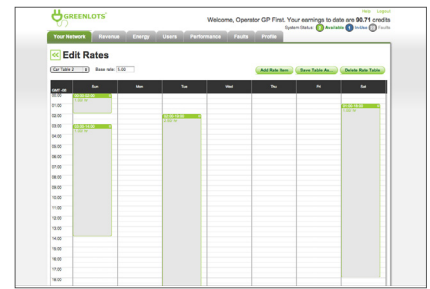

Customisable For Your Corporate Branding

Greenlots® provides the tools that make it easy to own and operate your own charging network. This includes various levels of integration from a customised branded webpage to a fully-integrated server solution. Please contact us for more information.

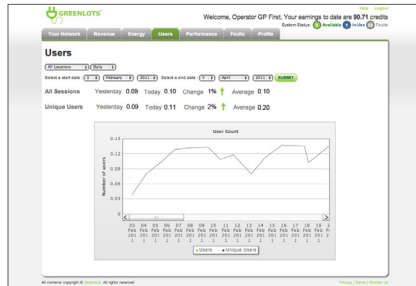

Network Operator

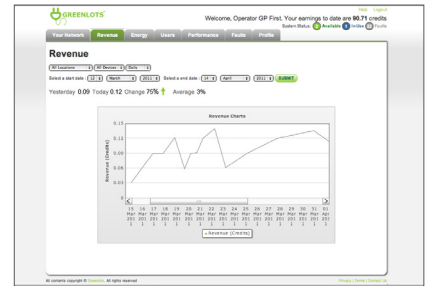

Map-based overview

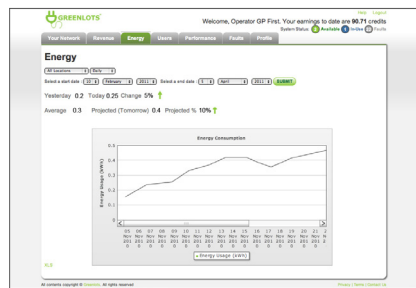

Dynamic time-of-use pricing

Users

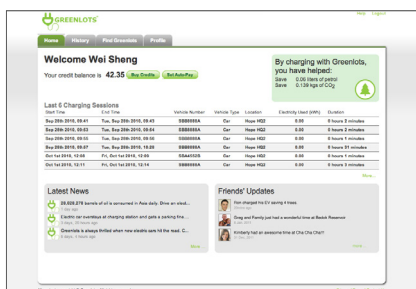

Revenue

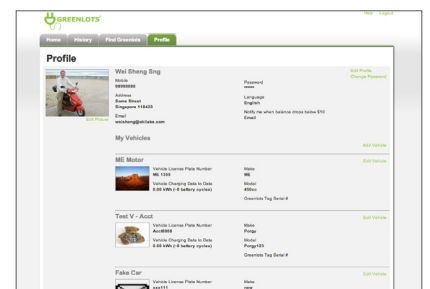

Load profile and forecasting

Leveraging Google Maps® API and real-time status updates gives the operator an unparalleled overview of their charging network. Network operators know as soon as someone plugs-in or a fault occurs. This constant stream of data feeds an intelligent database that can be used for forecasting power demand, targeted marketing to users or for detailed insight into charging behaviour.

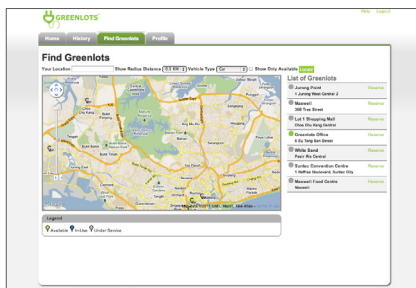

Electric Vehicle User

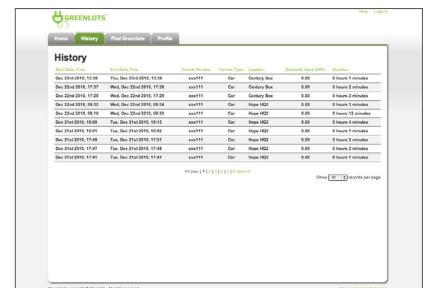

Detailed overview with community feature

Manage your vehicle records

Find Greenlots charging points

View charging history

Perfect for the driver: Don't just locate your nearest charging spot, find where your friend just are!

Greenlots Sky is the first social networking-enabled platform for the EV user. Connect with friends, keep track of vehicle service bulletins and manage your EV account all from one place.
