

## ELECTRIC VEHICLE CHARGING NETWORKS

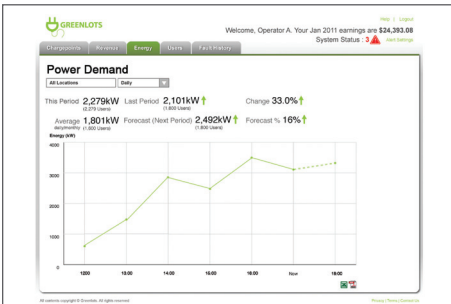

**Greenlots®** Fleet is the all-in-one fleet solution for companies who are operating their corporate fleets with electric vehicles.

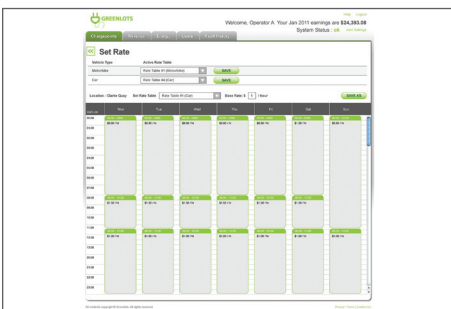

- The most advanced charging platform internationally
- Turnkey solution from planning to implementation
- Compliant with international safety standards for reliable operations

All of **Greenlots®** charging devices are designed to comply with international safety standards for electric vehicle supply equipment (EVSE) such as IEC61851.

The **Greenlots®** Fleet operator platform is designed to meet the needs of fleet managers to operate their fleet of electric vehicles effectively. Simplicity, safety and reliability make **Greenlots®** Fleet the ideal choice to optimize operations for the next generation of vehicle fleets.

Location	Serial ID	Time & Date Reported	Status	Time & Date Fixed	Fault Description

## Greenlots® Fleet Solutions

State of the art turnkey EV Fleet Management platform with hardware and software solutions

- Integrated demand/response management
- Automated start-stop charging algorithm
- Integrated overload protection for existing energy infrastructure
- Integrated fleet manager portal inclusive of monitoring, analytics and data management
- Smartphone fleet operator app
- Site-specific design, configuration and optimization support
- Site-specific engineering and planning support
- Site-specific project implementation support
- Full platform customization for both hardware and software

## Easy Operation
